REGENT
SOLID RIGID CORE

MONARCH
residential solid rigid core

SOVEREIGN
commercial solid rigid core

FEATURES AND DIFFERENTIATORS

Adore® Regent™ Solid Rigid Core boasts a significantly high concentration of vinyl in its composition. The result is greater density and rigidity of the flooring. As such, Regent™ Solid Rigid Core offers some unique features and benefits that may be preferred in some installations over other resilient flooring types.

100% Waterproof Core

The solid, homogeneous, unlayered core is 100% waterproof.

Impact and damage resistant

The rigidity of Regent™ Solid Rigid Core renders the flooring significantly more resistant to indentation and static loads.

Exceptional dimensional stability in variant light and temperatures

Monarch and Sovereign's exceptional heat and light resistance allows for installations in direct sunlight and no need for acclimation during installation in moderate temperature zones.

Regent™ Solid Rigid Core is Resistant to Peeling

Resistant to peeling or delamination, the solid design of Regent™ Solid Rigid Core increases the overall strength of the product.

Regent™ Solid Rigid Core offers attributes that favor a fast, easy, "foolproof" installation

Including accurate profiling and squareness, a superior locking system (angle/angle, angle/drop) and rigidity that facilitates the locking-action in click installation.

Regent™ Solid Rigid Core requires fewer transitions

Regent Solid Core only requires transitions every 4000 ft² or 60 linear feet.

Regent™ Rigid Solid Core significantly reduces telegraphing

Regent Solid Core reduces visible telegraphing and makes it possible to install flooring over existing floors including, but not limited to, ceramic, cement and planks.

Regent Solid Rigid Core IXPE acoustic underlayment is:

Made of waterproof polyethylene. The IXPE pad is mildew and mold resistant 100% recyclable and odor-free.
